

Attorney Docket No. P12401

**AMENDMENTS TO THE SPECIFICATION**

Please replace the abstract, with the following rewritten abstract:

The present invention relates to a A method for congestion control when setting up calls in a cellular CDMA-based communication system. A call setup request from a user equipment in a congested cell is prohibited by means of broadcasted call admission messages. However, the The call admission information indicates permitted and/or restricted accesses for carrier frequencies and/or neighbored cells. Neighbored cells using the same carrier frequency as the congested cell are marked with a restricted access flag. Therefore, the user equipments in the congested cell will request for a call setup only in one of those neighbor cells without access restrictions. By this means In this manner, the user equipments will do not contribute to the interference level in the congested cell.
